COMPUTEX Forum

World Leading Companies Share Their Views on GenAI

Cutting Edge AI Applications

Discuss future trend developments and industrial application innovations such as computing chips, cloud services, smart vision, spatial computing, and deepfakes while analyzing opportunities stemming from generative AI applications in 2024.

Innovations in AI Key Hardware

From front-end computing power to end-to-end generation, GenAI requires high computing power and hardware support. Hardware will become the key factor in the development of GenAI, driving the new development possibilities from industry to consumer side.
